

Appln No.: 09/674,975
Amendment Dated: October 29, 2003
Reply to Office Action of July 29, 2003

Amendments to the Specification:

Page 4, paragraph beginning on line 25:

As used in the specification and claims hereof, an "immunogenic fragment" is a molecule which includes at least a portion of the extracellular domain of a transmembrane protein to direct ~~and~~ an immunological response to that transmembrane protein when the immunogenic fragment is coupled to or administered with an antigenic carrier protein effective to break tolerance ~~and~~ administered with an adjuvant. It is not required that the immunogenic fragment alone be effective to stimulate an immune response, although such stimulation would not take a given fragment outside the scope of the present invention.
